Dear Colleagues,

Since the earliest days of statistical mechanics, the existence of thermal fluctuations have posed a threat to our understanding of thermodynamics. This threat was vividly captured by Maxwell, who envisaged a nimble and light fingered being, able to systematically exploit and accumulate these fluctuations. With the latest developments in quantum nanotechnology, the manipulation of individual systems becomes a realistic possibility, while a modern consensus seems to have emerged that the being must still fail due to properties of information processing. Assessing the strength of these claims requires addressing many of the key open questions in the foundations of statistical mechanics.

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
