Special Issue

Entropy-Centric Intelligent Computation with Graph: In Pursuit of Advanced Computational Theories, Methods, and Applications

Message from the Guest Editors

This Special Issue will be a forum for researchers working on mining and learning from entropy-centric intelligent computation with graphs in pursuit of advanced computational theories, methods, and applications. Submitted research papers and comprehensive reviews should focused on the following research areas:

- Entropy-centric intelligent computation theories with graphs;
- Entropy-centric graph structured-based data modeling with time-evolving, multi-relational, and multi-modal nature;
- Neural graph representation learning for homogeneous or heterogeneous graphs in the guidance of the entropy principle;
- Entropy-centric data mining for knowledge graphs, linguistics graphs, bibliographic graphs, textual graphs, social networks, traffic networks, and molecules;
- New entropy-centric computing framework/method for graph structure-based data;
- Applications of entropy-centric graph mining in e-commerce, text mining, stock prediction, recommendation systems, self-driving cars, protein modeling, program analysis, etc.

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth
Department of Physics, University at Albany, 1400 Washington Avenue, Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
