Special Issue

Spreading Dynamics in Complex Networks

Message from the Guest Editor

This Special Issue seeks to deepen our understanding of any type of spreading processes through networks from a holistic perspective, ranging from abstract models to analysis of real-world situations. Papers reporting theoretical results, data analysis, or computational modeling, as well as methodology papers are all welcome. Topics include but are not limited to:

- epidemic spreading
- network science
- network dynamics
- information spreading
- social network analysis
- computational modeling
- infectious disease modeling
- percolation theory
- machine learning in complex networks

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth
Department of Physics, University at Albany, 1400 Washington Avenue, Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
