Special Issue

Computation in Complex Networks

Message from the Guest Editors

This Special Issue aims at collecting original and highquality papers within the research field of complex network computation. When investigating complex systems, several relevant questions arise such as how information/viruses spread, how groups of nodes/diseases form and evolve, and how to detect and improve robustness over their non-trivial topological structure, just to provide some examples. Papers analyzing transportation infrastructures, communication networks, financial networks, political networks, power grid systems, ecosystems, bioinformatics and network medicine aspects are welcome. We also invite papers conceptualizing complex systems through theoretical frameworks.

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University at Albany, 1400 Washington Avenue, Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
