Special Issue

Economics, Entropy, Energy Transition and Sustainability

Message from the Guest Editor

This Special Issue aims to explore a crucial topic that has been raised in recent years in both policy and economic literature: the consequences of the second law of thermodynamics for economic activities and sustainability. To reflect the interdisciplinary nature of entropy and its applications, this Special Issue will include works on the following main subjects:

- The role of the entropy law in shaping economic activities
- Entropy and sustainable economic growth
- Relevance of entropy to economics
- Thermo-economics of energy efficiency
- Energy transition: key challenges and lessons learned
- Social entropy and social ecology
- Economic and social impact of renewable energy sources
- Sustainable energy efficiency financing and delivery mechanisms

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth
Department of Physics, University at Albany, 1400 Washington Avenue, Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
