

Special Issue

Emergent Collective Dynamics in Bioenergetic Molecular Systems

Message from the Guest Editors

This topic focuses on an exploration of the one of the most central challenges in bioenergetics—an understanding of molecular mechanisms underlying highly efficient energy generation, transfer and transformation in cellular processes such as photosynthesis, mitochondrial bioenergetics, and enzymatic energy metabolism. The rapid advances in this area are fostered by the application of experimental and theoretical approaches developed in solid, soft matter, nonlinear and active-matter physics which are being explored to understand the extremely effective function of living matter. The topic covers different aspects of emergent dynamics in molecular structures driven by energy pumping. The topic is not limited to these phenomena and seeks to encompass a wide spectrum of emergent collective dynamics in biosystems, which makes them extremely effective functioning active matter.

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Department of Physics, University at Albany, 1400 Washington Avenue,
Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
