

Special Issue

Shortcut to Adiabaticity in Classical and Quantum Systems

Message from the Guest Editors

This Special Issue aims to highlight recent advancements in enhanced STA methodologies and to stimulate dialogue on current trends and future directions in adiabatic processes, potential topics include:

- Experimental implementations of STA schemes in atomic state population transfer and molecular manipulation.
- Advancements in manipulating external fields to achieve desired quantum states efficiently.
- Contributions discussing the intersection of quantum heat engines and quantum thermodynamics in the context of STA.

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University at Albany, 1400 Washington Avenue,
Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
