

Special Issue

Foundations of Statistics

Message from the Guest Editors

Statistical induction is the *lingua franca* of scientific experimentation and plays a dual role in mathematical deduction. This very duality has not always been clear in the defense of particular schools of statistical inference thought. The writings in this Special Issue of *Entropy* explore the never-ending intellectual collation of those schools of thought in the context of the exciting challenges posed by the role of causation in statistical thought; the pervasive use of randomization as a panacea for not-so-good experiments; the business-as-usual performance of statistical hypotheses tests in Medicine and Science; the ambiguity of robots' availability; the disputed permanence of statistical principles. Prof. Carlos Alberto de Bragança Pereira

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University at Albany, 1400 Washington Avenue,
Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
