Special Issue

Nonparametric Statistical Inference with an Emphasis on Information-Theoretic Methods

Message from the Guest Editor

In recent years, there has been an increased interest in statistical analysis of structured data and high-dimensional problems. This has created a challenge for classical statistical inference which frequently does not cover such cases. A huge number of studies have been devoted to proposing new solutions or modify existing ones in order to account for specificity of such data. However, frequently, these methods work well for specific parametric models and fail when misspecification occurs. Thus, there is a growing need to develop nonparametric and robust procedures in this context which will meet contemporary needs in, among others, dependence analysis, supervised and unsupervised classification and regression, feature selection, and prediction analysis. In particular, nonparametric approaches based on an information-theoretic approach provide interesting and yet not sufficiently explored methodologies for this challenge.

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth
Department of Physics, University at Albany, 1400 Washington Avenue, Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
