# **Special Issue**

# Advances in Quantum Cryptography

# Message from the Guest Editors

Quantum cryptography originated from Stephen Wiesner's concept of quantum money in the 1970s. Since then, the field has expanded significantly and is now one of the most viable and commercially available quantum technologies. Over the past forty years, there have been substantial advancements, making it an opportune moment to review the progress in quantum communication, including developments in quantum networks, over the last four to five decades. This Special Issue aims to consolidate the recent progress in quantum cryptography for both discrete and continuous variables. There have also been great strides in quantum networks using hybrid quantum and classical communication protocols. In this issue, we welcome all submissions related to recent advancement in the field.

# **About the Journal**

# Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. Entropy is inviting innovative and insightful contributions. Please consider Entropy as an exceptional home for your manuscript.

# Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University at Albany, 1400 Washington Avenue, Albany, NY 12222, USA

#### **Author Benefits**

## Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
