

Special Issue

Patterns, Entropy, Surface Textures and Related Applications

Message from the Guest Editor

The rapid advances of nanotechnology in materials science have led to the development of extremely useful texture-controlled surfaces that are now ubiquitous in our daily lives. Textured surfaces are also important for modern microbial elimination, semiconductor processing, information transfer, self-cleaning processes, machining, fracture, friction and wear, color, reflectivity, adhesion, cook-wear, heat transfer, catalysis, drug development, fluid-flow, aerodynamics, and fractal representations. Surface science has thus become the key value-added branch of every core science and technology discipline. Surfaces may be thought to be associated with energy and entropy that is associated with their texture and chemistry. Atomic diffuseness is also often a key feature of nanoscale surfaces. Surfaces are now routinely described by their autocorrelation lengths and root mean-squared roughness. This journal issue is directed at the assessment of such surfaces, and their properties and usefulness.

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University at Albany, 1400 Washington Avenue,
Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
