

Special Issue

Robustness of Graph Neural Networks

Message from the Guest Editors

The primary objective of this Special Issue is to assemble experts from diverse disciplines to showcase their innovative methodologies and models that enhance the robustness of GNNs. We will discuss various aspects, including the development of novel robust GNN architectures; the robustness analysis of GNNs in relation to noise and dataset biases; and the examination of GNN robustness from the perspectives of entropy and information theory. We will also delve into the scalability and reliability of GNNs on large-scale graph datasets, their adversarial robustness to attacks, out-of-distribution samples and group transformations (equivariance), as well as the application of robust GNN algorithms in social network analysis, point cloud, biology and chemistry-related fields.

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University at Albany, 1400 Washington Avenue,
Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
