

## Special Issue

# Free Volume in Thermodynamics

### Message from the Guest Editor

The concept of free volume and its distribution are used to explain molecular motion and compressibility in systems such as liquids and solids (amorphous or crystalline). Usually, free volume increases with increasing temperature, and so it is central to the concept of molecular motion, diffusion, mobility, cavity structures and emergent elasticity. For this reason, it plays an important role in thermodynamics such as in glass transitions, as evidenced by the spectacular success of the phenomenological Doolittle model. The experimental determination of free volume (e.g., through positron annihilation spectroscopy) and its explanation in terms of theoretical approaches (e.g., hole theory) or computer simulations (e.g., using Voronoi tessellation) depends on how free volume is defined. This Special Issue is an attempt to draw together various authors who can contribute to different aspects of this important field in thermodynamics, its historic development, and its relationship with other modern theories, such as the mode-coupling theory.

## About the Journal

### Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
