Message from the Guest Editors

A set of climatic events that have occurred across the paleolithic ages all the way to today have caused profound changes in the biosphere. In this context, knowledge of the potential natural vegetation is key, to understand global changes and identify possible treats. The value of bioindicator plants is clear, used as a predictive tool to interpret the landscape and therefore analyze the evolution of vegetation cover, as well as the types of land use more suitable to each portion of territory.

This Special Issue looks for new material not yet published, which relates the natural plant communities and their dynamic evolution (in a short or a long term) to bioclimatic changes and anthropic actions in the landscape, through analyses of the floristic composition, the edaphoclimatic conditions, and integration management methods. We particularly welcome paperwork obtained from empirical research, modeling, remote sensing, landscape planning, decision support tools, fundamental plant or vegetation science, and specific case-studies which span a range of spatial and temporal scales.

Message from the Editor-in-Chief

Environmental issues are quickly becoming central political, economic and academic topics of the twenty-first century. A large number of modern challenges are directly or indirectly caused by complex interactions between environmental issues. Such issues require interdisciplinary research, knowledge and insights to understand and, ultimately, for solutions to be found. Through the journal *Environments*, we strive to create a platform for meaningful discourse by accepting contributions from a wide range of fields. We sincerely hope you will consider publishing your distinguished work in this highly-accessible, peer-reviewed journal.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [PubAg](#), [AGRIS](#), [GeoRef](#), and [other databases](#).

Journal Rank: [CiteScore](#) - Q1 (*Ecology, Evolution, Behavior and Systematics*)
