closed (31 December 2017)

Message from the Guest Editor

Dear Colleagues,

The historic 2016 climate change pact at the U.N. Climate Change Conference in Paris, France illustrates the growing concern about how climate change will increase environmental risk and societal welfare. The complexity of climate change requires a cross-cutting interdisciplinary systems approach to manage environmental risk, including strategies to lower greenhouse gas emissions, mitigate the extent of climate change, and adapt to global temperature rise. This Special Issue is seeking original, unpublished papers that describe recent advances in various environmental risk issues in relation to climate shifts. While a technical perspective is welcome, an interdisciplinary, systems approach is encouraged to promote state-of-theart solutions that can address climate change risk at local, national, or global scales.

Message from the Editor-in-Chief

Environmental issues are quickly becoming central political, economic and academic topics of the twenty-first century. A large number of modern challenges are directly or indirectly caused by complex interactions between environmental issues. Such issues require interdisciplinary research, knowledge and insights to understand and, ultimately, for solutions to be found. Through the journal Environments, we strive to create a platform for meaningful discourse by accepting contributions from a wide range of fields. We sincerely hope you will consider publishing your distinguished work in this highly-accessible, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), PubAg, AGRIS, GeoRef, and other databases.

Journal Rank: CiteScore - Q1 (*Ecology, Evolution, Behavior and Systematics*)
