

Special Issue

Monitoring of Contaminated Water and Soil

Message from the Guest Editor

Human activities can cause significant changes in the balances and interactions between water and soil matrices: intensive agriculture, industrialisation, urbanisation, and deforestation can alter the water balance and the cycle of nutrients, significantly modifying the state of environmental matrices, leading to problems such as pollution of water resources, soil depletion, and loss of biodiversity. Early understanding of these changes is essential to implement strategies to mitigate the negative impacts of human activities on the environment as soon as possible. The sector of monitoring water and soil matrices is characterised by the high degree of innovation necessary to provide concrete and practical responses to these environmental challenges. Therefore, the purpose of this Special Issue is to collect the most significant contributions regarding the advancement of applied and theoretical research aimed at monitoring and characterising the state of water and soil matrices to obtain results that can be directly used to start actions to protect natural resources and restore them to an acceptable quality state.

About the Journal

Message from the Editor-in-Chief

Environmental issues are quickly becoming central political, economic and academic topics of the twenty-first century. A large number of modern challenges are directly or indirectly caused by complex interactions between environmental issues. Such issues require interdisciplinary research, knowledge and insights to understand and, ultimately, for solutions to be found. Through the journal *Environments*, we strive to create a platform for meaningful discourse by accepting contributions from a wide range of fields. We sincerely hope you will consider publishing your distinguished work in this highly-accessible, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Sergio Ulgiati

1. Department of Science and Technology, Parthenope University of Naples, Centro Direzionale, Isola C4, 80143 Napoli, Italy

2. School of Environment, State Key Joint Laboratory of Environment Simulation and Pollution Control, Beijing Normal University, No. 19 Xijiekouwai Street, Beijing 100875, China

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubAg, AGRIS, GeoRef, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.2 days after submission; acceptance to publication is undertaken in 3.4 days (median values for papers published in this journal in the first half of 2025).
