

Special Issue

Mental Disorders, Cognitive Impairment and Dementia Among Older Adults

Message from the Guest Editor

Mental disorders, cognitive decline, and dementia represent critical public health challenges in the context of global aging. These problems profoundly affect the quality of life of older adults and their families, and must be comprehensively understood if effective solutions are to be developed. This Special Issue is dedicated to research on physical or cognitive interventions that aim to address mental disorders, cognitive decline, and dementia in older adults. It seeks to highlight effective multidisciplinary approaches that contribute to the prevention, management, and comprehensive care of these conditions from biological, physical, psychological, cognitive, and social perspectives. We welcome the submission of original research, systematic reviews, and any clinical studies that address mental disorders, cognitive decline, and dementia in older adults.

About the Journal

Message from the Editor-in-Chief

Epidemiologia is an international, peerreviewed, open access, multidisciplinary journal that focuses on the latest outstanding research in epidemiology. Researchers in academic and clinical settings as well as health professionals are encouraged to publish research articles, short communications, and review articles. We welcome the broad research community with expertise in epidemiology to contribute to the development of this platform, with the shared goal of accelerating the advancement of scientific knowledge in the field all over the world.
