

Special Issue

Biofuel Production by Microalgal Fermentation

Message from the Guest Editor

Microalgae have promising properties, such as the high production of lipids, proteins, and valuable pigments. Moreover, they are robust and can be used to treat wastewater with high nutrient concentrations. Potential biofuels include fatty acids, which can be used for biodiesel production; however, further research is needed on the topic before the industrial implementation of the process. Manuscripts looking into biofuel production are encouraged, which includes the comparison of different microalgal species. Parameters such as light wavelength, mixotrophic growth, the use of photobioreactors, and waste streams are of interest. Furthermore, photosynthetic microbial fuel cells are of interest for electricity production. Finally, upscaling and studies on making aviation fuels are encouraged.

About the Journal

Message from the Editor-in-Chief

Welcome to a new open access journal, Fermentation, which meets the growing need for a high quality peerreviewed international journal with easy access to all researchers globally. We hope that you will share our enthusiasm for this new journal and look forward to working with you to make Fermentation a leader in its field. Your contributions are vital for the success of this new journal. Proposals for editing a special issue for a particular topical area are always welcome.

Editor-in-Chief

Dr. Badal C. Saha
Retired, National Center for Agricultural Utilization Research, USDA-ARS, Peoria, IL, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biotechnology and Applied Microbiology) /
CiteScore - Q1 (Plant Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the first half of 2025).
