

Special Issue

Sustainable Grape Production, Climate Change, and Wine Quality

Message from the Guest Editor

Climate change is affecting grape harvest yield, must composition, and wine quality in many of the regions classified as producers of quality wines. To mitigate such effects, different strategies can be carried out, including viticultural ones and those related to wine microbiology and biotechnology. In this Special Issue, we aim to compile articles addressing, but not limited to, the following:

- Sustainable vineyard production and its impact on the final wine quality.
- The use of viticultural practices to address the effects of climate change and their impact on the final wine quality.
- The use of fermentative biotechnologies to enhance wine quality in the context of climate change and sustainable production.

About the Journal

Message from the Editor-in-Chief

Welcome to a new open access journal, Fermentation, which meets the growing need for a high quality peerreviewed international journal with easy access to all researchers globally. We hope that you will share our enthusiasm for this new journal and look forward to working with you to make Fermentation a leader in its field. Your contributions are vital for the success of this new journal. Proposals for editing a special issue for a particular topical area are always welcome.

Editor-in-Chief

Dr. Badal C. Saha
Retired, National Center for Agricultural Utilization Research, USDA-
ARS, Peoria, IL, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biotechnology and Applied Microbiology) /
CiteScore - Q1 (Plant Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the first half of 2025).
