Message from the Guest Editor

Dear Colleagues,

Dietary fiber consists of non-digestible carbohydrate and lignin that are intrinsic and intact in plants as defined by the Institute of Medicine. The current evidence base highlights the importance of dietary fiber in order to reduce the risk of adverse health outcomes such as some cancers, cardiovascular diseases, obesity and type 2 diabetes. However, findings on the role of dietary fiber in human health and disease are scattered and unclear. The current Special Issue aims to bring together recent reviews and cutting-edge original papers in the field to address current gaps in the evidence base on the role of dietary fiber in human health.

Message from the Editor-in-Chief

Fibers is intended as an integrative platform, bringing together specialists with expertise concerning a large range of biological, synthetic, metallic and mineral fibers. The intent is to bring together scientists who would otherwise be unlikely to encounter each other's findings. By facilitating communication across specialties, the journal will advance understanding of the underlying commonality of many physical and chemical aspects of fibers.

We welcome submission of manuscripts from a diverse range of disciplines relating to many types of fibers utilizing a variety of research approaches.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), PubAg, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Multidisciplinary*) / CiteScore - Q1 (Civil and Structural Engineering)
