

Special Issue

Recent Progress in Cellulose Dissolution and Regeneration

Message from the Guest Editor

I would like to invite you to contribute to this Special Issue focused on cellulose dissolution. The increased interest in transforming cellulose to advanced bioproducts has created the need to dissolve and regenerate cellulose in various solvent systems, specifically ionic liquids. The effective dissolution of cellulosic macromolecules is the first predominant step to prepare functional bio-based materials with tunable and desirable properties. The current Special Issue is intended to summarize the state of the art of the current knowledge of cellulose dissolution and regeneration. Papers are sought on the mechanisms of cellulose dissolution and solvents (such as ionic liquids), chemistry of solvents, cellulose–solvent interactions, rheology of cellulose solution, techniques used to investigate the dissolution, materials formed and their characterization and applications. Papers can be either original research or reviews of the current research.

About the Journal

Message from the Editor-in-Chief

Fibers is intended as an integrative platform, bringing together specialists with expertise concerning a large range of biological, synthetic, metallic and mineral fibers. The intent is to bring together scientists who would otherwise be unlikely to encounter each other's findings. By facilitating communication across specialties, the journal will advance understanding of the underlying commonality of many physical and chemical aspects of fibers.

We welcome submission of manuscripts from a diverse range of disciplines relating to many types of fibers utilizing a variety of research approaches.

Editor-in-Chief

Prof. Dr. Martin J. D. Clift

In Vitro Toxicology Group, Institute of Life Sciences 1, Swansea
University Medical School (SUMS), Swansea SA2 8PP, Wales, UK

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei
Compendex, PubAg, CAPlus / SciFinder, Inspec, and other
databases.

Journal Rank:

JCR - Q2 (Materials Science, Multidisciplinary) / CiteScore
- Q1 (Civil and Structural Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 23.3 days after
submission; acceptance to publication is undertaken in 5.8
days (median values for papers published in this journal in
the first half of 2025).
