Topical Collection

Rethinking Wildland Fire Governance: A Series of Perspectives

Message from the Collection Editors

This Topical Issue of *Fire* invites Perspectives and Case Reports (syntheses and reviews) focused on ideas to transform how wildland fire governance is approached across the world. We start the Topical Issue with a Perspective that raises questions associated with taking a Tabula Rasa, or clean slate, "what if" reflection on wildfire governance. We welcome responses to that Perspective as well as additional contributions associated with the following themes: - Perspectives on novel approaches that advance ways for coexisting (or living) with fire: - Perspectives on local and national wildland fire policies, and how they are helping or hindering wildfire goals; - Perspectives on what the shared stewardship of landscape fire means across the spectrum of actors; - Perspectives on what it really means, as is so often advocated, to 'increase fire on the landscape': - Perspectives of traditional ecological knowledge and how it can help to inform wildfire management.

About the Journal

Message from the Editor-in-Chief

Fire is an international open-access journal about the science, policy, and technology of fires and how they interact with communities and the environment. Fire seeks to provide a forum to help the fire science community convey how we can live with fire in a changing world. Fire seeks submissions from interdisciplinary studies that take a pyrogeography perspective of fires occurring in natural, cultural, and industrial landscapes and how they interact with communities in the science-policy interface. Fire's Editorial Board are widely recognized international leaders. The journal emphasizes quality and innovation and has a rigorous peer-review process. I strongly recommend Fire for the rapid publication of your innovative research publications and case studies.
