

Special Issue

Fire Suppression and Fuel Management in Eastern Europe: Research Advances and Best Practices

Message from the Guest Editor

Wildfire science has made substantial progress towards mitigating and explaining the increasing societal concerns about fire effects on natural and social systems. These major breakthroughs, although accomplished mostly in countries with a legacy in wildfire research, such as the USA, Australia, Portugal and Spain, were successfully disseminated to other regions of the world and adapted to local conditions. As a result, a new generation of fire scientists emerged in these countries which, in turn, are making considerable progress in how fire is perceived, confronted and used, and how forests and fuels are managed in relation to fire risk. This Special Issue “Fire Suppression and Fuel Management in Eastern Europe: Research Advances and Best Practices” aims to cover recent developments in Fire and Forest Management science in the countries of Eastern Europe, the Balkans, Caucasus and Turkey.

About the Journal

Message from the Editor-in-Chief

Fire is an international open-access journal about the science, policy, and technology of fires and how they interact with communities and the environment. *Fire* seeks to provide a forum to help the fire science community convey how we can live with fire in a changing world. *Fire* seeks submissions from interdisciplinary studies that take a pyrogeography perspective of fires occurring in natural, cultural, and industrial landscapes and how they interact with communities in the science-policy interface. *Fire's* Editorial Board are widely recognized international leaders. The journal emphasizes quality and innovation and has a rigorous peer-review process. I strongly recommend *Fire* for the rapid publication of your innovative research publications and case studies.
