Message from the Guest Editors

Dear Colleagues,

The lack and excess of nutrition will have adverse effects on the growth and health of aquatic animals. Reasonable feed nutrition level can promote the growth of aquatic animals, and make them obtain strong immunity and disease resistance. On the other hand, feed accounts for a large proportion of production costs in the process of aquaculture. High-quality feed can obtain a better feed conversion rate and reduce breeding costs, while reducing resource waste and environmental pollution. This Special Issue welcomes articles on topics involving aquatic animal nutrition and feed, including nutritional requirements, nutritional metabolism, nutrition and immunity, nutrition and environment, and development of new feed ingredients.

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [GEOBASE](#), [PubAg](#), [FSTA](#), and [other databases](#).

Journal Rank: JCR - Q1 (Marine and Freshwater Biology)
