

## Special Issue

# Fisheries Monitoring and Management

### Message from the Guest Editor

Numerous new policies and strategies in fishery monitoring and management have been developed to address increasing pressure on the coastal marine ecosystems. With significant changes in socio-economic conditions, natural resources and ecosystems, many new issues have emerged during the implementation of these policies, and a series of subsequent policies have yet to be introduced. There is an urgent need to organize a Special Issue on marine fishery monitoring and management. This Special Issue welcomes submissions centered around fishery monitoring and management, including (but not limited to) monitoring and assessing fishery resources and ecosystems, new techniques and methods to monitor fisheries, fishery resources and ecosystems, the dynamics of fish communities and habitats under climate change and anthropogenic activities and their ecological impacts, monitoring and assessing fishery biodiversity, ecosystem-based fishery monitoring and management, etc.

## About the Journal

### Message from the Editor-in-Chief

*Fishes* is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, FSTA, and other databases.

#### Journal Rank:

JCR - Q1 (Marine and Freshwater Biology)
