

## Special Issue

# Influences of Environmental Change on Fishes and Fisheries

### Message from the Guest Editors

This special issue focuses on the consequences of environmental changes for physiological, developmental and genetic stress responses, as well as adaptation processes, at the individual and population levels in fish. Aquatic habitats are already experiencing rapid and profound climate-related changes due to rising water temperatures, more frequent heat waves, hypoxia, ocean acidification, altered salinity levels and changes in food availability. These conditions expose fish at all life stages to complex and mutually influencing stressors. This issue aims to provide an integrative framework for understanding how these stressors influence fish biology from the molecular level to populations.

## About the Journal

### Message from the Editor-in-Chief

*Fishes* is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Maria Angeles Esteban

Department of Cell Biology and Histology, Faculty of Biology, University of Murcia, 30100 Murcia, Spain

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, FSTA, and other databases.

#### Journal Rank:

JCR - Q1 (Marine and Freshwater Biology)
