

Special Issue

Fish Processing and Preservation Technologies

Message from the Guest Editors

Fish processing and preservation technologies are critical components of the modern aquaculture industry, exerting a direct influence on the quality, market competitiveness, and food safety of aquatic products. As global demand for aquatic products continues to rise, emerging innovations in processing and preservation techniques integrate traditional methods with advanced technologies, creating new opportunities and challenges for the industry. Traditional preservation methods, such as salting, smoking, and drying, remain vital in many regions, offering irreplaceable benefits by extending shelf life and preserving flavor. Concurrently, modern preservation techniques have gained significant attention in recent research. These methods are more effective in maintaining the nutritional integrity and sensory qualities of aquatic products, while also contributing to reduction in food waste and the enhancement of product value. This Special Issue will address the developments of fish processing and preservation technologies to present a comprehensive report of the latest advancements in both research and technology.

About the Journal

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Maria Angeles Esteban

Department of Cell Biology and Histology, Faculty of Biology, University of Murcia, 30100 Murcia, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Marine and Freshwater Biology) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
