Impacts of Dietary Supplements on Fish Growth and Health

Message from the Guest Editor

With the intensification of aquaculture production, fish have become more susceptible to stress and, consequently, diseases, making it necessary to develop technologies that reduce these negative impacts and promote greater efficiency in the growth and better health of these animals. Dietary supplementation, whether through the use of essential nutrients such as proteins/amino acids, lipids/fatty acids, carbohydrates, vitamins and minerals or also through non-nutritional compounds, such as prebiotics, probiotics, herbal medicines, plant extracts, etc., has become increasingly important, as many studies have confirmed its benefits on growth performance, immune response, resistance to diseases and well-being in many fish species. Therefore, we invite researchers to submit works that address topics related to the use of dietary supplements and their effects on the growth and health of fish, with the aim of making a significant contribution to expand knowledge about the productive chain of these animals in a global context.

About the Journal

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Maria Angeles Esteban

Department of Cell Biology and Histology, Faculty of Biology, University of Murcia, 30100 Murcia, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Marine and Freshwater Biology) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
