

## Special Issue

# Advances in Ecology and Management of Aquatic Invasive Species

### Message from the Guest Editors

Non-native species can have major impact on aquatic biodiversity. Even though in some cases invasive species may be beneficial for local fisheries, ecology and economy, that is not the case with the majority of invasive species. The effects that they have on the native aquatic fauna and flora can be critical to their wellbeing and in some cases to the survival of the native species. These detrimental impacts can lead to a loss of revenue in fisheries, agriculture and the food processing industry. It is crucial to know the ecology of the invasive species and to identify their biological, behavioral and ecological advantages that allow them to dominate aquatic systems and to outcompete indigenous species. This Special Issue of *Fishes* aims to publish papers that deal with and advance the above-mentioned knowledge of invasive species in a variety of aquatic taxa (e.g., fishes, crustaceans, mollusks) as well as their management.

## About the Journal

### Message from the Editor-in-Chief

*Fishes* is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, FSTA, and other databases.

#### Journal Rank:

JCR - Q1 (Marine and Freshwater Biology) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
