

Special Issue

Fisheries Policies and Management

Message from the Guest Editors

As climate change has become a serious issue, renewable energy has been suggested to be a possible solution to the problem. Wind energy and solar energy are the most common renewable energy sources. Aiming to have further and sophisticated discussions on the use of renewable energy, particularly focusing on its impact on fishery, this Special Issue plans to compile research work conducted by international scholars from various areas, such as ocean policy, fishery, aquaculture, marine recreation, environmental education, blue economy, etc. By presenting multiple aspects in relation to the use of renewable energy around the world, this Special Issue seeks to provide an integrated view and possible solutions to sustain fishery development. Other studies that strive to sustain fishery development and management are also welcome.

About the Journal

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Maria Angeles Esteban

Department of Cell Biology and Histology, Faculty of Biology, University of Murcia, 30100 Murcia, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Marine and Freshwater Biology)
