

Special Issue

Pivotal Roles of Feed Additives for Fish

Message from the Guest Editor

Over the years, feed additives can promote growth health and improve feed efficiency in fish. Some additives have positive effects on the blood and biochemical parameters of fish. This includes adequate hemoglobin levels, plasma proteins, and other indicators of strengthening the fish's immune system, making them more resistant to diseases and infections. Furthermore, food additives, in adequate amounts, can influence the body composition of fish, favoring muscle development and reducing fat deposition. In summary, feed additives play a multifaceted role in aquaculture, contributing to fish's healthy growth and resilience. We invite you to contribute to this Special Issue of the MDPI *Fishes* Journal. This Special Issue aims to: Submissions may include original research articles or comprehensive reviews of fish feed additives' pivotal roles. Research articles, reviews, communications, short notes, book reviews, comments, opinion papers, communications, and case reports are all welcome in our journal. Research areas may include (but are not limited to) aquaculture, fisheries, and biology. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Maria Angeles Esteban

Department of Cell Biology and Histology, Faculty of Biology, University of Murcia, 30100 Murcia, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Marine and Freshwater Biology) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
