## Advances in Crab Fisheries

### Message from the Guest Editor

Crab species form the basis of valuable fisheries supporting the social, economic, and ecological needs of societies spanning from the coldest to warmest habitual areas of earth. Crabs occupy both aquatic and terrestrial ecosystems, with global-scale exploitation of them growing faster than fisheries of most other major groups, and increasingly as luxury commodity resources. Crabs feature a high diversity in geographic ranges and variations in life history strategies among species and populations, but most species share a common attribute of having two overarching processes affecting their productivity, namely fisheries exploitation and environmental quality. The long persistence of crabs on earth, in addition to their erratic growth patterns and generally low mobility, help make crabs an ideal subject for studying the impacts of changes in exploitation strategies and climate variables by underscoring the importance of observed changes in species' behaviours and success resulting from both broad-scale and localized changes in exploitation strategies and environmental processes.

## About the Journal

### Message from the Editor-in-Chief

*Fishes* is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, and other databases.

#### Journal Rank:

JCR - Q1 (Marine and Freshwater Biology) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
