Advances in the Physiology of Aquatic Organisms

Message from the Guest Editor

Aquatic organisms (fish, crustaceans, mollusks, among others) possess complex and highly specialized physiological mechanisms, fundamental to ensuring their survival in the aquatic environment. These mechanisms allow them to maintain homeostasis, cope with environmental variations, and perform vital functions such as respiration, osmoregulation, nutrition, locomotion, and stress response. The physiology of aquatic organisms has advanced significantly in recent decades due to the need for a better understanding of how these animals respond to environmental changes and captive management, among other factors. Therefore, we invite researchers to submit papers that address topics related to the physiology of aquatic organisms, contributing significantly to the expansion of knowledge regarding the production chains of these animals in a global context.

About the Journal

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Maria Angeles Esteban

Department of Cell Biology and Histology, Faculty of Biology, University of Murcia, 30100 Murcia, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Marine and Freshwater Biology)
