

Special Issue

Biology and Control of Invasive Fishes

Message from the Guest Editor

Special Issue Information Mankind has been moving fish around for millennia, sometimes on purpose, and just as often, not. Some of these introduced species have become super-abundant, upsetting ecosystem balance, earning them the distinction of being considered invasive. Increasing effort is now being applied to both understand the causes of this phenomenon and its consequences, and then to control particular invasive species. This Special Edition has a relatively broad scope, and solicits articles that address how and why fish species have become invasive, their consequences, and how some species are presently controlled (or not) and why. Examples of successful control that are of broad significance to multiple situations and species are especially encouraged. Examples are also sought from both freshwater and marine systems. Theoretical manuscripts are welcomed, as well as papers that describe successful ongoing management approaches that might have not been described in peer-review literature before.

About the Journal

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Maria Angeles Esteban

Department of Cell Biology and Histology, Faculty of Biology, University of Murcia, 30100 Murcia, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Marine and Freshwater Biology)
