Message from the Guest Editor

Dear Colleagues,

Fluid motion is usually affected by externally imposed electric and magnetic fields, for example, liquid metals in fusion blankets, electrolytes in batteries, biological fluids under MRI medical exams, etc. This Special Issue of *Fluids* is dedicated to recent advances of experimental and numerical modeling of electrically conductive fluid flows under the action of electromagnetic forces. Emphasis will be given to Newtonian and non-Newtonian fluid flows, low temperature plasmas, laminar, transitional and turbulent fluid flow, electromagnetic instabilities, electro- or magneto-rheological models, granular materials and suspensions, nanofluids and magnetic nanoparticles, crystal growth and polymers, blood and other biofluids, mixtures of fluids and particles, etc.

Prof. Dr. Ioannis Sarris

Message from the Editor-in-Chief

Fluids (ISSN 2311-5521) is an international journal on all aspects of fluids in open access format: research articles, reviews and other contents are released on the internet immediately after acceptance. You are invited to contribute a research article or a comprehensive review for consideration and publication in *Fluids*. The scientific community and the general public have unlimited free access to the content as soon as it is published. Please consider *Fluids* as an exceptional, exciting enterprise ready to reward your trust, attention, and active participation.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q2 (*Mechanical Engineering*)
