

Special Issue

CFD-DEM Modelling of Multiphase Flow

Message from the Guest Editor

Dear Colleague, Fluid flow and particle transport have attracted the attention of the researchers due to its widespread applications in engineering systems as well as in other applications. There are many possible applications for gas–liquid, liquid–liquid, gas–solid, and liquid–solid flow regimes. Slug flow, particle-laden flow, slurry flow, fluidized beds, and sedimentation are a few examples of multiphase flow. Many real-life applications, including spray drying, inertial separation, particle transport in the lung, cyclone separator, liquid fuel, and aerosol dispersion, are classic examples of multiphase flow. A precise understanding of multiphase flow modelling is important for engineering systems and device optimization. This Special Issue is open to any subject area related to fluid flow and particle transport modelling.

Guest Editor

Dr. Saidul Islam

About the Journal

Message from the Editor-in-Chief

Fluids (ISSN 2311-5521) is an international journal on all aspects of fluids in open access format: research articles, reviews and other contents are released on the internet immediately after acceptance. You are invited to contribute a research article or a comprehensive review for consideration and publication in *Fluids*. The scientific community and the general public have unlimited free access to the content as soon as it is published. Please consider *Fluids* as an exceptional, exciting enterprise ready to reward your trust, attention, and active participation.

Editor-in-Chief

Prof. Dr. D. Andrew S. Rees

Department of Mechanical Engineering, University of Bath, Bath BA2 7AY, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Mechanical Engineering)
