Numerical Modeling and Experimental Studies of Two-Phase Flows

Message from the Guest Editors

Two-phase flows (e.g., gas–gas, gas–liquid, liquid–liquid) are found in many natural phenomena, engineering, and industrial applications. The nonlinear motions of the interface between two phases (two fluids) and its deformations and breaks, phase change, heat transfer, turbulence, shockwaves, and violent interaction with devices/systems become very complicated, both in terms of developing experimental techniques for their measurement and for numerical modeling for the analysis of these two-phase flows. This Special Issue aims to provide researchers and scientists with the opportunity to present and discuss their original works on new numerical modeling, simulations, and experimental representation of engineering and industrial systems or any other two-phase systems from microscale to larger-scale problems. Papers related to two-phase flows are highly welcome which not only address fundamental science, but also engineering applications. Dr. Nguyen Van-Tu

About the Journal

Message from the Editor-in-Chief

Fluids (ISSN 2311-5521) is an international journal on all aspects of fluids in open access format: research articles, reviews and other contents are released on the internet immediately after acceptance. You are invited to contribute a research article or a comprehensive review for consideration and publication in *Fluids*. The scientific community and the general public have unlimited free access to the content as soon as it is published. Please consider *Fluids* as an exceptional, exciting enterprise ready to reward your trust, attention, and active participation.

Editor-in-Chief

Prof. Dr. D. Andrew S. Rees

Department of Mechanical Engineering, University of Bath, Bath BA2 7AY, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Mechanical Engineering)
