### Message from the Guest Editors

Due to the important role of fermentation in food processing and preservation, this special issue aims to establish a deeper relationship between the food microbiome and the characteristic metabolites and volatiles in traditional and industrial fermentation processes.

### The special issue will address the following topics:

- Microbial diversity and metabolites in fermented foods.
- Volatile compounds in fermented foods.
- Changes in volatile compounds during fermentation.
- Dynamics of the microbiome during fermentation.
- Correlation between microbial diversity and specific volatile compounds.
- Statistical approach and applied models to link significant microbiota and specific volatiles.
