Message from the Guest Editors

Proteins are main components in food, especially cereals, meat, eggs, milk, and fishery products. The properties and structures of protein are closely related to the food quality. Food processing including chemical and physical treatment may lead to changes in the protein structure and function. This Special Issue will look at the structure and function of proteins during food processing. It not only includes the purification and structural characterization of proteins and the interaction between proteins and other food components during food processing but also the functional properties of them. In addition, the effects of protein changes during food processing on food safety and nutritional evaluation of proteins will also be welcome. The proteins discussed should be closely related to the food-processing and food industry.

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, *Foods* has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, AGRIS, PubAg, and other databases.**

Journal Rank: JCR - Q1 (Food Science and Technology) / CiteScore - Q1 (Health Professions (miscellaneous))
