Food Processing, Cooking and the Digestive System Modify the Bioaccessibility of Bioactive Compounds in Foods

Message from the Guest Editors

The health benefits of the bioactive compounds of foods from plant or animal sources mainly depend on their bioaccessibility and bioavailability. The potential of bioactive compounds to exert their effects relies on their release from the matrix, and changes during digestion, absorption, metabolism and biodistribution. In vitro standardised methods to simulate the different phases of digestion, including large intestinal fermentation, are widely used and permit the bioaccessibility of bioactive compounds to be determined. In vitro standardised gastrointestinal digestion can also be used to evaluate the influence of different food processing technologies on bioactive compounds bioaccessibility. Storage and processing conditions are important factors influencing the bioaccessibility/bioavailability of bioactive compounds in food formulations, and it is, therefore, important to consider the role these processes play. The study of how food processing technologies and digestion affect the bioaccessibility/bioavailability of bioactive compounds is important for a full understanding of how these molecules interact with human physiological and pathological processes.

About the Journal

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, *Foods* has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Editor-in-Chief

Prof. Dr. Arun K. Bhunia

1. Department of Food Science, Purdue University, West Lafayette, IN 47907, USA
2. Department of Comparative Pathobiology, Purdue University, West Lafayette, IN 47907, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, AGRIS, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Food Science and Technology) / CiteScore - Q1 (Health Professions (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
