Detection and Control Technologies of Harmful Microorganisms in Food Supply Chain

Message from the Guest Editors

Harmful microorganisms in foods have threatened public health and damaged the world economy due to the medical burden and recalled products. Some harmful microorganisms can persist and transfer along the food supply chain from farm to fork, posing risks for public health and challenges for detection, prevention, and control. Thus, it is extremely vital to develop advanced, rapid, and reliable technologies to detect and control harmful microorganisms to ensure microbial food safety.

The scope of this Special Issue includes, but is not limited to, the development and application of detection and control technologies for tackling harmful microorganisms along the food supply chain to ensure microbial food safety and public health; quantitative risk-based solutions and informed decisions to improve food safety; novel food control technologies (intervention/sanitation technologies and hygienic design) to control harmful microorganisms in foods; and rapid and reliable detection technologies to detect harmful microorganisms in food systems and environments.

About the Journal

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, *Foods* has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Editor-in-Chief

Prof. Dr. Arun K. Bhunia

1. Department of Food Science, Purdue University, West Lafayette, IN 47907, USA
2. Department of Comparative Pathobiology, Purdue University, West Lafayette, IN 47907, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, AGRIS, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Food Science and Technology) / CiteScore - Q1 (Health Professions (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
