Food Preservation: Challenges and Efforts for the Future

Message from the Guest Editors

Microbial hazards and food oxidation have acquired substantial economical, ethical and legal importance in the food industry. Administration of a variety of food additives, along with strict preservation processes, are applied to suppress the development of pathogenic microorganisms and oxidation reactions, as well as to prolong the shelf-life of foods. The use of natural antimicrobial compounds, functional microbial starter cultures and antioxidants for "synthetic preservative-free" products are included among the latest and most successful accomplishments in the food industry. Biopreservatives contribute to microbial safety and antioxidant activity and may offer organoleptic, technological, nutritional and health benefits. Such agents may provide additional advantages compared to preservatives and starter cultures currently used in food manufacture and are expected to result in improvement and optimization of the food production processes, leading to safer and healthier products. Hence, we have an interest in manuscripts dealing with the most recent achievements of specific antimicrobial activity and/or antioxidant capacity of natural products and functional microbial cultures.

About the Journal

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, *Foods* has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Editor-in-Chief

Prof. Dr. Arun K. Bhunia

1. Department of Food Science, Purdue University, West Lafayette, IN 47907, USA

2. Department of Comparative Pathobiology, Purdue University, West Lafayette, IN 47907, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, AGRIS, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Food Science and Technology) / CiteScore - Q1 (Health Professions (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
