Special Issue

Current and Future Prospects for the Use of Pulsed Electric Field in the Food Industry

Message from the Guest Editors

In recent years, the use of pulsed electric fields has been applied to the conservation of foods using low temperatures and short treatment time, allowing to obtain processed foods with the same nutritional value and organoleptic characteristics as the fresh products. It is important to know the kinetics of inactivation of microorganisms and enzymes present in food and, once the safety of the processed product is guaranteed, to estimate the degradation of nutrients and their characteristics. We must also extend these studies to determine these mechanisms and kinetics after food treatment. On the other hand, as a result of its ability to permeabilize cell membranes, the pulsed electric field technology allows the extraction of bioactive compounds or natural additives (such as dyes) from the waste generated in the food industry, reducing the use of solvents and the energy used during the process. To guarantee the application of this technique in the food industry, it is necessary to scale the processes at the industrial level. The objective of this Special Issue is to collect the latest research based on this technology, emphasizing its possible applications in the food industry.

About the Journal

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, Foods has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Editor-in-Chief

Prof. Dr. Arun K. Bhunia

- 1. Department of Food Science, Purdue University, West Lafayette, IN 47907, USA
- 2. Department of Comparative Pathobiology, Purdue University, West Lafavette. IN 47907. USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, AGRIS, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Food Science and Technology) / CiteScore - Q1 (Health Professions (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
