Polyphenols in Food: Current Knowledge and Directions for Future Research II

Message from the Guest Editors

Over the last several decades, polyphenols have attracted great interest at both at scientific and industrial levels because of their possible use as food additives and/or nutraceuticals especially due to their antioxidant, antimicrobial, and pigment properties. In this sense there have been numerous studies carried out to evaluate their content in food. The large number of published articles that have used methods to determine the total content of phenolic compounds should be noted. Although these methods have been reviled by some authors due to the need to use advanced analytical methods such as high-performance liquid chromatography in order to specifically relate the individual biological activity of each phenolic compound separately, the determination of total phenolic compounds is still important since it can be related to technological processes or as an estimate of the total antioxidant capacity. Additionally, different methods have been evaluated to extract, isolate, and purify the different phenolic compounds, and to determine their biological activity through in vitro and in vivo approaches using bioaccessibility/bioavailability studies.

About the Journal

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, *Foods* has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Editor-in-Chief

Prof. Dr. Arun K. Bhunia

1. Department of Food Science, Purdue University, West Lafayette, IN 47907, USA

2. Department of Comparative Pathobiology, Purdue University, West Lafayette, IN 47907, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, AGRIS, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Food Science and Technology) / CiteScore - Q1 (Health Professions (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.8 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2026).
