Food Proteins from Alternative Sources: Processing, Functionality, Properties, and Applications

Message from the Guest Editors

Traditional animal-based sources offer food proteins with high nutritional value. Despite their high nutritional and functional properties, their production has been characterized as unsustainable due to their increased environmental impact. The continuous population growth in combination with climate change and the environmental risks that our planet face gave a nudge to policymakers and society to explore novel, alternative, and sustainable food proteins which may efficiently substitute the traditional animal-based ones. Academia and industry have been working actively on this scope over the last few years, seeking novel protein sources with high nutritional value, low environmental impact, high production yields, cost efficiency, and desired technofunctional and sensory properties to be used as ingredients in food products. This Special Issue will gather basic and applied research from academia and industry focused on a wide range of novel terrestrial, marine, and biotechnological sources for food applications, selecting relevant original research and review articles which will offer insights and solutions to the current scientific and societal challenges.

About the Journal

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, *Foods* has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Editor-in-Chief

Prof. Dr. Arun K. Bhunia

1. Department of Food Science, Purdue University, West Lafayette, IN 47907, USA

2. Department of Comparative Pathobiology, Purdue University, West Lafayette, IN 47907, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, AGRIS, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Food Science and Technology) / CiteScore - Q1 (Health Professions (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
