Special Issue

Imaging Wound Ballistics – Taking Full Advantage of the Electromagnetic Spectrum: 2nd Edition

Message from the Guest Editors

We set up the Special Issue “Imaging Wound Ballistics” in *Forensic Sciences*, which covers the use of any imaging technique across the electromagnetic spectrum to document, detect, preserve, and examine gunshot-related injuries or the effectiveness of a bullet in ballistic experiments. The standard imaging technique used for the documentation of gunshot-related injuries is certainly photography. The result, a photograph, is a two-dimensional (2D) image created by visible light, which is defined as electromagnetic radiation within the portion of the electromagnetic spectrum that can be perceived by the human eye. Visible light lies between ultraviolet (shorter wavelengths) and infrared radiation (longer wavelengths). The Special Issue “Imaging Wound Ballistics” welcomes articles (reviews, communications, original studies, technical reports, and case reports) that focus on the application of imaging techniques in gunshot-related injuries in humans, animals, or simulants in a forensic context.

Assistant

Guest Editors

Mr. Dominic Gascho

Department of Forensic Medicine and Imaging, Institute of Forensic Medicine, University of Zurich, Winterthurerstrasse 190/52, CH-8057 Zurich, Switzerland

Mr. Sören Kottner

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Bruce Royston McCord
Department of Chemistry and Biochemistry, Florida International University, Miami, FL 33199, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 27 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the first half of 2025).
