

Special Issue

Marine Forensics: Advances in Investigations and Technologies

Message from the Guest Editor

Marine forensics—the technical and legal issues related to the scientific study of investigations in the marine environment—has been widely applied in maritime and aviation disaster investigations. There is a growing need for law enforcement agencies, officers and forensic scientists to leverage advances in DNA technologies to protect marine wildlife and habitats, thereby bringing marine criminals to justice. Marine forensics investigations can play a key role in enforcing domestic environmental protection laws and supporting international treaty requirements. This Special Issue should appeal to a range of experts, including investigation professionals, fisheries managers, deep-sea explorers, naval architects and marine forensics experts. Authors are encouraged to explore the way in which advanced marine forensics approaches and processes are improving forensic investigations. Insights gained from this Special Issue will help to standardize and mainstream procedures in the professional field of marine forensics.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 27 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the first half of 2025).
