Prof. Dr. Christian Brischke

Thünen Institute of Wood
Research, Hamburg, Germany

Deadline for manuscript
submissions:

31 January 2025

Message from the Guest Editors

Wood and wood-based products have a high potential for sequestering carbon and can be obtained from sustainable forest resources. The longer a wood product remains in use, the more carbon remains bound. Thus, the biological durability of wood plays an important role in the service life of wooden structures and components. With the increasing regulation of wood preservatives and criticism surrounding non-sustainably produced tropical wood species, innovative approaches for improving wood durability are desirable. Environmentally friendly and sustainable materials are becoming more popular, leading to increased interest in the development of biobased alternatives to traditional wood protection methods. These developments should improve the sustainability of wood-based materials and the products industry. We encourage studies from all fields, including method development, experimental studies, quality assurance monitoring approaches, and models to contribute to this Special Issue in order to contribute to the knowledge surrounding wood durability mechanisms, wood modification strategies and the protection of wooden structures.

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
