Message from the Guest Editors

Dear Colleagues,

Forest trees are unparalleled biomes in terms of their combined ecological, economic and social importance. Due to their wide distribution, largely random mating systems, and large population sizes, most tree species have extensive genetic variation within and between populations. Although the genomic resources of various forest trees have proliferated, forest trees are still a difficult genetic system to study in many respects. With the development and improvement of genomic technologies, more studies on the ecological genomics of non-model organisms will provide an important theoretical and practical basis for the development of ecology. For this Special Issue, we welcome research contributions from all areas, including experimental studies, genomic research methods and models, to advance the development of forest tree ecological genomics.

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: [JCR](#) - Q1 (*Forestry*) / [CiteScore](#) - Q1 (*Forestry*)
