Message from the Guest Editors

This Special Issue of *Forests* is focused on research related to management of family forests and the behaviour of these forest owners as ultimate decision makers in their forest properties. Research articles may focus on any aspect of forest management that could result in increased material and immaterial benefits to family forest owners, introduction of public or privately funded governance mechanisms that support the increased provision of biodiversity and ecosystem services from family forests as well as owner participation in these programs, and finally related investigations on owner characteristics and opinions. Studies in which comparisons between countries or regions are made with respect to the above mentioned topics, are also welcome.
